

Advanced Problem Solving and Search

Tutorial 2

Sarah Gaggl, Lucía Gómez Álvarez

Exercise 2.1:

Design a Simulated Annealing Algorithm for the Maze Problem of Exercise 1.1. Consider the following questions.

- How would do you represent a solution? If you are considering different options, discuss the pros and cons.
- How do you generate the initial solution resp. how do you ensure feasibility of solutions?
- What is the neighbourhood of a solution?
- What is the evaluation function?

Exercise 2.2:

Now, design a Tabu Search Algorithm for the same problem. Consider the following questions.

- Would you use the same representation, neighbourhood and evaluation function? Why?
- How do you organize the tabu list?
- What kind of aspiration criteria would you consider?
- How do you organize the long-term memory?
